

Autodata provides unrivalled **Penetration Testing** services via our highly-accredited partner Intelisecure. Here's the proof ...

“ We have now had the results of the Intelisecure Penetration Test and they surprised me - in a good way! Our previous pen test had been performed by another supplier two months earlier for the renewal of our Cyber Essentials Plus accreditation, but failed to highlight the critical and high risks, nor most of the medium risks. I am pleased that we can make our perimeter more secure by addressing the areas of weakness exposed by Intelisecure's pen testers.

I would also like to congratulate Intelisecure on getting their report out swiftly as I had to wait 2-3 weeks to receive it from the other supplier. ”

**Simon Parsons**  
Director of IT, CitySprint

“ We've been working with Autodata for several years and they recommended we use Intelisecure for this year's annual Penetration Testing. It was a far better experience than previous years. Intelisecure communicated well at different stages of the testing and the results and report provided were in depth and informative. They also provided a breakdown of the different levels of vulnerabilities found which helped our security team to address the matters quicker.

Overall a great experience and we would definitely use Intelisecure again next year. ”

**Sasha Kaveh**  
Infrastructure Manager, Hamilton Fraser Insurance

“ Coffey engaged with Autodata to support the renewal of our Cyber Essentials certification. Intelisecure were able to kick-off the project at very short notice and scheduled the penetration testing in alignment with Coffey’s IT resource availability. The team from Intelisecure were professional, knowledgeable and supportive throughout the process.

I would not hesitate in recommending Intelisecure to any organisation looking to overcome their cyber security challenges. ”

**Sean Forrest**  
Head of IT, Coffey International Development Europe

“ We pen-test annually as part of our due diligence for network security and to ensure conformity with cyber security best practices. I was happy to try Intelisecure based on Autodata’s recommendation and pricing. I was very impressed with the security assessment they provided. The report was issued quickly and contained more detail and in-depth information than we had previously received. ”

**Dan Wilson**  
Vice President Global IT, Ikon Science
