

Autodata provides unrivalled **Cyber Security Assessment** services.  
Here's the proof ...

“ The results from Autodata’s Security Assessment surprised me - in a good way! Our previous assessment had been performed by another supplier two months earlier for the renewal of our Cyber Essentials Plus accreditation, but failed to highlight the critical and high risks, nor even most of the medium risks.

I am pleased that we can make our perimeter more secure by addressing the areas of weakness exposed by Autodata. I was also impressed that their reports arrived swiftly, as I had to wait over 2 weeks before I received anything from the other supplier. ”

**Simon Parsons**  
**Director of IT Ops, CitySprint**

“ We decided to engage a new supplier for our Security Assessment and selected Autodata based on their credentials and overall approach. The whole process was very smooth and I felt fully engaged throughout. Their Statement of Work was laid out coherently and was easy to understand and they provided good, clear communication regarding the information they needed to get going.

Once the assessment commenced, the project team was impressively self-sufficient, providing us with daily progress updates and issuing their final report within a matter of days. I was very satisfied with the service and experience of working with Autodata and would definitely recommend them. ”

**Dan Young**  
**Head of IT Operations and Support, Killik & Co**

“ After working with Autodata for a few years, we decided to use them for our Security Assessment. I found them very easy to work with as they were responsive and organised throughout and provided us with all the necessary information in advance. They were also able to provide me with a brief overview of the results prior to the actual presentation date, which was invaluable to have.

The final report arrived, presented in a very clear and easy-to-follow format, along with lots of advice for remedial actions which I was able to put in place within a couple of days. Overall, I would highly recommend Autodata to anyone who needs a reliable and thorough company to carry out their cyber security assessments. ”

**Greg Smart**  
**Head of IT & Partner, ADG Corporate**

“ Coffey engaged with Autodata to support the renewal of our Cyber Essentials certification. They were able to kick-off the project at very short notice and schedule the penetration testing in alignment with our internal IT resource availability.

The team were professional, knowledgeable and supportive throughout the process. I would not hesitate in recommending Autodata to any organisation looking to overcome their cyber security challenges. ”

**Sean Forrest**  
**IT Manager EMEA, Tetra Tech**

“ We pen-test annually as part of our due diligence for network security and to ensure conformity with cyber security best practices. I was very impressed with the security assessment that Autodata provided. Their report was issued quickly and contained much more detail and in-depth information than we had previously received. ”

**Dan Wilson**  
**Vice President Global IT, Ikon Science**

“ We've been working with Autodata for several years so we decided to use them for our annual Security Assessment. It was a far better experience than previous years. They communicated well at different stages of the testing and the results and report provided were in depth and informative.

They also provided a breakdown of the different levels of vulnerabilities found which helped our security team to address the matters quicker. Overall a great experience and we would definitely use Autodata again. ”
