

Autodata provides unrivalled **Penetration Testing** services via our highly-accredited partner Rootshell Security. Here's the proof ...

“ We have now had the results of our Rootshell Security Penetration Test and they surprised me - in a good way! Our previous pen test had been performed by another supplier two months earlier for the renewal of our Cyber Essentials Plus accreditation, but failed to highlight the critical and high risks, nor most of the medium risks. I am pleased that we can make our perimeter more secure by addressing the areas of weakness exposed by Rootshell's pen testers.

I would also like to congratulate Rootshell on getting their report out swiftly as I had to wait 2-3 weeks to receive it from the other supplier. ”

**Simon Parsons**  
Director of IT Ops, CitySprint

“ We decided to engage a new supplier for our penetration testing and selected Rootshell Security based on their credentials and overall approach. The whole process was very smooth and I felt fully engaged throughout. Rootshell's Statement of Work was laid out coherently and was easy to understand and they provided good, clear communication regarding the information they needed to get going.

Once the pen testing commenced, Rootshell's project team was impressively self-sufficient, providing us with daily progress updates and issuing their final report within a matter of days. I was very satisfied with the service and experience of working with Rootshell and would definitely recommend them. ”

**Dan Young**  
Head of IT Operations and Support, Killik & Co

“ After working with Autodata for a few years, they suggested that we use Rootshell Security for this year’s Penetration Test. I found Rootshell very easy to work with as they were responsive and organised throughout and provided us with all the necessary information in advance of the testing period. Their engineer was also able to provide a brief overview of the results prior to the actual presentation date, which was invaluable to have.

The final report arrived, presented in a very clear and easy-to-follow format, along with lots of advice for remedial actions which I was able to put in place within a couple of days. Rootshell were also able to offer a free re-test which no other provider has offered in the past. Overall, I would highly recommend Rootshell to anyone who needs a reliable and thorough company to carry out their pen test. ”

**Greg Smart**  
Head of IT & Partner, ADG Corporate

“ Coffey engaged with Autodata to support the renewal of our Cyber Essentials certification. Rootshell Security were able to kick-off the project at very short notice and scheduled the penetration testing in alignment with our IT resource availability.

The Rootshell team were professional, knowledgeable and supportive throughout the process. I would not hesitate in recommending Rootshell to any organisation looking to overcome their cyber security challenges. ”

**Sean Forrest**  
IT Manager EMEA, Tetra Tech

“ We pen-test annually as part of our due diligence for network security and to ensure conformity with cyber security best practices. I was happy to try Rootshell Security based on Autodata’s recommendation and pricing. I was very impressed with the security assessment they provided.

The Rootshell report was issued quickly and contained much more detail and in-depth information than we had previously received. ”

**Dan Wilson**  
Vice President Global IT, Ikon Science

“ We’ve been working with Autodata for several years and they recommended we use Rootshell Security for this year’s annual Penetration Testing. It was a far better experience than previous years.

Rootshell communicated well at different stages of the testing and the results and report provided were in depth and informative. They also provided a breakdown of the different levels of vulnerabilities found which helped our security team to address the matters quicker.

Overall a great experience and we would definitely use Rootshell again. ”

**Sasha Kaveh**  
Infrastructure Manager, Hamilton Fraser Insurance
